 - Heart Disease
- Smoker** (even if you have quit)
- If You have:**
 - Glaucoma
 - Cataract
 - High Blood Pressure
 - Diabetes
 - Heart Disease
- Sensitive to light**
- Excessive exposure to the sun**
- Female**
- Light eyes, light skin**
- Inadequate consumption of green, leafy vegetables**

QuantifEYE® - I understand my risk for Macular Degeneration.

I choose to : Accept Decline

Please initial: _____

Related Macular Degeneration (AMD)

is a leading cause of blindness in adults. Its effects are both permanent and irreversible, and only in some cases can it be treated. *It is best managed, if caught early, with the use dietary supplements and ultraviolet protection.*

We can now take measures to reduce your risk of developing this disease. The **QuantifEYE®** test is a light response test that only takes a few minutes. We now screen all patients *45 years and older*, and develop a baseline measurement that allows us to track any changes that might occur in the future. Insurance does not yet cover this test, but we consider it very necessary. The cost of the test is minimal to you (only \$19) and we feel it's well worth the cost as it may offer you additional protection against a very devastating disease.
